System Dynamics Framework for Sustainable Development

We propose using system dynamics methodology for modeling and analysis of sustainable manufacturing. System dynamics models systems by determining the relationship between factors. The underlying premise is that the structure of a system gives rise to its behavior. This method involves two major stages in analysis.

A System Dynamics Framework for Sustainable Manufacturing

The framework is intended for use as a platform to develop model components that may be integrated to analyze sustainable manufacturing for different industries and geographies. Proceedings Title: Proceedings of the 27th Annual System Dynamics Society Conference

a conceptual SD modeling framework, which is considered to be effective to analyze the complex eco-city system. The application of the proposed framework is tested with simulation scenarios and data from a prestigious eco-city case study, and interesting insights are provided. Finally, Section 5 discusses findings and highlights future research potentials. 2.

The system dynamics model enabled the testing of the potential value of the system dynamics modeling process framework. Results from a fractional factorial designed experiment identified the sensitive parameters that affect the key result measures established to assess model behavior, focusing on timeliness, effectiveness, and quality.

and then displaying the dynamic consequences. Such mental models belong to the same class as the computer models used in system dynamics. In fact a system dynamics model is often built from assumptions in the mental models. Mental models are rich and often sufficiently Models All actions based on models Mental models Basis of human activity.

The Newtonian framework is applied to two standard system dynamics modelsâ€”inventoryâ€”workforce and economic long-waveâ€”where their behaviour is analyzed using force dominance on the stocks. Results show improved intuitive understanding of system behaviour compared with existing dominance methods, particularly for models with exogenous effects, oscillations and many loops.
