Computational anatomy is a discipline focusing on the study of anatomical shape and form at the visible or gross anatomical scale of morphology. It involves the development and application of computational, mathematical and data-analytical methods for modeling and simulation of biological structures.

Computational complexity theory is a branch of the theory of computation in theoretical computer science that focuses on classifying computational problems according to their inherent difficulty, and relating the resulting complexity classes to each other. A computational problem is understood to be a task that is in principle amenable to being solved by mechanical application of mathematical ...

Machine learning has become a pivotal tool for many projects in computational biology, bioinformatics, and health informatics. Nevertheless, beginners and biomedical researchers often do not have enough experience to run a data mining project effectively, and therefore can follow incorrect practices, that may lead to common mistakes or over-optimistic results.

The intrinsic interplay between ecological and evolutionary dynamics explains formation of species' range margins. This theoretical study by Jitka Polechová shows that adaptation fails when genetic drift reduces genetic diversity below that required for adaptation to a heterogeneous environment.

About - The Dunn Lab is in the Department of Ecology and Evolutionary Biology at Yale University.. We study how evolution has produced a diversity of life. We are interested in learning about the actual history of life on Earth as well as the general properties of evolution that have contributed to these historical patterns.
