Numerical analysis is the study of algorithms that use numerical approximation (as opposed to general symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics).

### **Numerical analysis - Wikipedia**

Numerical methods for ordinary differential equations are methods used to find numerical approximations to the solutions of ordinary differential equations (ODEs). Their use is also known as "numerical integration", although this term is sometimes taken to mean the computation of integrals.

The most common way of computing numerical derivative of a function at any point is to approximate by some polynomial in the neighborhood of  $x$ . It is expected that if selected neighborhood of  $x$  is sufficiently small then approximates near well and we can assume that  $f'(x) \approx \frac{f(x+h) - f(x-h)}{2h}$ .
